Published European patent applications and international applications (Art.158)

I.1
European patent applications and international applications, which have entered the European phase, arranged in accordance with the International patent classification

legal basis
Art. 87-89; R. 38 EPC

data in PRS for
All entries in the European Patent Bulletin since number 1/78 (20.12.78)
first document affected EP 0000091; first entry in PRS on 20 December 1978

field meaning
ynmmdd Priority date (filing date of the industrial design application claimed as priority).
CC ... yy nnnnnn Country code, year and application number of the industrial design application claimed as priority.

code meaning
A person who has duly filed in or for any state party to the Paris Convention for the Protection of Industrial Property, an application for a patent or for the registration of a utility model or for a utility certificate or for an inventor's certificate, may make use of the right of priority when filing an European application in respect of the same invention during a period of 12 months from the date of filing the first application. European applications, as well as multiple priorities may be claimed, not withstanding the fact that they are originated in different countries. In this latter case time limits which run from the date of priority start from the earliest date of priority. The right of priority has the effect of counting the priority date as the date of filing of the European patent application for the purposes of articles 54 (Novelty) and 60 (Right to a European patent). The priority claim has also effect against other applications (of the same invention) filed by third parties in the 12 months period. It is not possible to claim priority once the term has expired.

INPADOC registers with this code the data (country code, serial number and filing date) of the industrial design application claimed as priority, which are published in the bulletin under the above-mentioned section next to INID code 30.
